TITLE: Mobile vacuum carriage

SOURCE: Finommechanika, no. 5, 1966, 140-143

TOPIC TAGS: vacuum technology, particle accelerator target, particle accelerator

ABSTRACT: The construction, operation, performance, and applications of a wheeled vacuum carriage, developed at the Central Research Institute for Physics for the removal by suction of the target area in a particle accelerator, has been described and illustrated by two photographs and seven detailed drawings. The carriage is capable of attaining vacuums of up to  $10^{-6}$  atm. at a suction rate of 60 l./sec. It can be remotely controlled. Operating experiences with the carriage were discussed. Peter, I.S.  
 Microdetermination of sulphur in gasolines  
 G/002/62/000/012/001/001  
 D287/D308

Chemische Technik, no. 12, 1962, 755-756

The maximum permissible S-content of 0.01% is exceeded in Hungarian gasolines, being 0.03 to 0.04%. The gasolines have to be subjected to desulphurization, as sulphur compounds are present in Pt-containing reforming catalysts. Hitherto used methods (e.g. the Grote-Kreker method) gave determinations of only 0.03% S. The present author modified both the method and the apparatus used by Granatelli, adding a known quantity of thiophen, thiocarbamide to n-heptane and, after modification of the fitting of the flask containing the Raney nickel catalyst (to inhibit condensation of the readily boiling starting material during heating and during introduc-

D287/D308

tion of  $N_2$ ), and intensive agitation of the catalyst and of the S-containing substance. Experimental and calculated values for 400 g samples differed only by 1.2 to 1.5%. The S-determination can be carried out in approximately 90 minutes. The method may be used for the determination of S in highly volatile products containing a high proportion of aromatics, or in purely aromatic products, and is recommended for desulphurization and reforming of gasolines as well as for hydroforming processes. There are 1 figure and 4 tables.

TITLE: Development of an oil diffusion pump with a delivery rate of 125 l/sec  
[Awarded 1st prize at the 1966 "Design and structural Solutions" competi-  
tion, sponsored by Finommechanika]

SOURCE: Finommechanika, no. 1, 1967, 7-10

TOPIC TAGS: diffusion pump, pump, oil backflow

ABSTRACT: The paper described the first of a series of diffusion pumps developed jointly by the Central Research Institute for Physics and the United Incandescent Company and assembled by Elekthermax. The design and dimensional data are given and measurement values concerning ultimate pressure and suction speed of the prototype are presented. A method is also suggested for computing the quantity of oil back-flow. Orig. art. has: 7 figures. [Authors' abstract]

TITLE: Catalysts and catalyst poisons in gasoline refining II

SOURCE: Magyar kemikusok lapja, no. 4, 1966, 173-183 "

TOPIC TAGS: catalytic reforming, petrochemistry

ABSTRACT: Experiments were carried out with gasolines and a catalyst of Russian origin to determine the sulfur and nitrogen tolerance of the catalyst. By using the experimental results, the highest allowable sulfur and nitrogen content can be predicted while reforming gasolines of different hydrocarbon types. In the highly paraffinic gasolines which represent the basic material of the Hungarian refineries, the maximal nitrogen content can be 0.0002 per cent by weight, that of sulfur 0.01 per cent by weight. Orig. art. has: 8 figures and 6 tables. [Based on authors' Eng. abst.] [JPRS: 36,862]

Budapest, Orvosi Hetilap, Vol 104, No 13, 31 Mar 63, pages 602-603.

Abstract: [Authors' Hungarian summary] The authors report the skin necrosis of two women patients whose thrombosis was treated with Syncumar. The necrosis developed gluteal in one case and on the breast in the other. The development of the hematoma and necrosis could not have been due to the decrease in the blood coagulation. An allergic endothelial damage is proposed. The necrotic skin was substituted by Reverdin skin-plastic in one of the cases. 9 Western references.

TITLE: Data concerning the association between the genus Geotrichum and various enterobacteria 26  
E

SOURCE: Microbiologia, parazitologia, epidemiologia, v. 10, no. 1, 1965, 33-40

TOPIC TAGS: bacteria, fungus, animal parasite, parasitology, intestinal disease

ABSTRACT: The authors found that the growth of strains of Geotrichum freshly isolated from faeces is enhanced by the presence of accompanying flora. Geotrichum was most frequently found associated with E. coli (51 percent) and Kl. Aerobacter (17 percent). These germs stimulated the growth of Geotrichum in vitro, while staphylococcus, dysentery bacilli etc. were indifferent and Proteus inhibited the growth. Animal experimentation seems to indicate that Geotrichum affects the pathogenicity of Kl. pneumoniae and E. coli. Orig. art. has: 4 figures and 3 tables. [JPRS]

Budapest, Magyar Onkologia, Vol 10, No 4, Dec 1966, p 200.

Abstract: A statistical survey is offered of the more than 500 patients treated at authors' clinic for breast cancer. 35 of these patients had bilateral breast cancer, generally in an advanced stage. Authors conclude that in the majority of cases of bilateral breast cancer one of the tumors is a metastasis, and only in about 10% of the cases are both tumors primary. No references.

Peter, Rozsa. Zum Begriff der rekursiven reellen Zahl. *Acta Sci. Math. Szeged* 12, Leopoldo Fejér et Frederico Riesz LXX annos nati dedicatus, Pars A, 239-245 (1950).  
 Ausgehend von einem Aufsatz von Specker [J. Symbolic Logic 14, 145-158 (1949)]; diese Rev. 11, 151] nennt die Verfasserin eine Folge  $\{a_n\}$  von positiven rationalen Zahlen rekursiv, wenn  $a_n = f(n)/g(n)$  gilt, wobei  $f$  und  $g$  rekursive Funktionen sind und  $g(n) \geq 1$  ist. Eine reelle Zahl  $r$  heisst rekursiv, falls es eine rekursive Folge  $a_n$  und eine rekursive Funktion  $h(m)$  gibt derart, dass bei  $n, n' \geq h(m)$  die Ungleichung  $|a_n - a_{n'}| \leq 1/m$  gilt. Weiterhin sagt man, die reelle Zahl  $r$  definiert einen rekursiven Schnitt, wenn  $m/(n+1) > r$  eine rekursive Beziehung zwischen  $m$  und  $n$  ist. Man kann dann leicht beweisen, dass  $r$  dann und nur dann einen rekursiven Schnitt definiert, wenn  $[nr]$

(d.h. die grösste ganze Zahl die nicht grosser als  $nr$  ist) eine rekursive Funktion von  $n$  ist. Weiter kann man behaupten, dass jede einen rekursiven Schnitt definierende reelle Zahl  $r$  der folgenden Bedingung genügt: Ist  $b_n$  eine beliebige rekursive Funktion von  $n$ , so lässt sich  $r$  in eine Reihe  $r = b_0 + a_1/b_1 + a_2/b_2b_1 + a_3/b_3b_2b_1 + \dots$  derart entwickeln, dass  $a_n$  eine rekursive Funktion von  $n$  ist. Also ist jede solche Zahl  $r$  rekursiv. Specker hat gezeigt, dass die letzteren Sätze sich nicht umkehren lassen. Die Hauptaufgabe dieses Aufsatzes ist, eine hinreichende Bedingung dafür anzugeben, dass eine rekursive Zahl  $r$  einen rekursiven Schnitt definiert. Diese Bedingung ist, dass  $r$  entweder rational oder irrational in dem Sinne ist, dass es rekursive Funktionen  $f(p, q)$  und  $g(p, q)$  gibt, so dass für alle positive ganze Zahlen  $p$  und  $q$  und für  $n \geq g(p, q)$  gilt:  $|a_n - p/q| > 1/f(p, q)$ .

Die beschränkt-rekursiven Funktionen und Ackermannsche Majorisierungsmethode. Publ. Math. Debrecen 4 (1956), 362-375.  
The author mentions an example due to Ackermann

[Math. Ann. 99 (1928), 118-133], of a general recursive function which is not bounded by any primitive recursive function. An example, due to Skolem (Noraski vid. Selsk. Forh. 17 (1944), 103-106; MR 8, 4), of a general recursive characteristic function which is not primitive recursive shows that this unboundedness is not an essential property of recursive functions which are not primitive recursive. However, in the construction of Skolem's example, an intermediate function is defined which is not bounded by any primitive recursive function, and this situation the author shows to hold always. If, in a system of equations defining a function from a set of initial primitive recursive functions, all functions occurring (auxiliary functions as well as the defined function) are bounded by primitive recursive functions, then the defined function is primitive recursive.

✓ \*Péter, Rózsa. Transfinite Rekursionen (Grundlagenforschung und rekursive Funktionen). Comptes Rendus du Premier Congrès des Mathématiciens Hongrois, 27 Août-2 Septembre 1950, pp. 419-428. Akadémiai Kiadó, Budapest, 1952. (Hungarian. Russian and German summaries)

This is a review of the history of the theory of recursive functions from the recursive number theory of Skolem [Skr. Vid. I. Kristiania, Mat. Nat. Kl. 1923, no. 6] to the work of Gödel, Ackermann, Herbrand, Kleene, Church, Markov, Post, Kálmár and Péter. The newest result mentioned states that transfinite recursion of type  $\omega^\omega$  leads out of the class of multiply recursive functions [Péter, J. Symbolic Logic 15, 248-272 (1950); these Rev. 12, 469]. The author stresses that the existence of undecidable problems in mathematics is due to the limitations imposed by the definition of "effective process." (This review is based on the German summary.)

PETER, ROZSA

Péter, Rozsa. Probleme der Hilbertschen Theorie der höheren Stufen von rekursiven Funktionen. Acta Math. Acad. Sci. Hungar. 2, 247-274 (1951). (Russian summary)

Mathematical Reviews  
Vol. 14 No. 8  
Sept. 1953  
Foundations

Recursive functions of Order I are defined using only natural number variables, those of Order II may require, in addition, variables for functions of type of Order I. The author proves that every function of Order I defined by a  $k$ -fold nested recursion may be defined by  $k$  primitive recursions of Order II. Conversely, every primitive recursive function of Order II may be expressed as a recursive function of Order I. This result may be extended to nested recursions of Order II in which the nestings occur only through substitutions on natural number variables. It is not known whether there exist functions of Order II which are not multiple recursive of Order I. However, the author shows that any multiple recursive function of Order II may be expressed in terms of a function of natural number variables of a variable number of arguments; such a function may

also be defined by transfinite recursion of ordinal type  $\omega$ . The diagonal function  $\psi$  of all multiple recursive functions of Order I is also a function of this type, but the author observes that  $\psi$  is completely multiple (vollständig-mehrfach) while the former are scatteredly multiple (zerstreut-mehrfach). A function is scatteredly multiple in case there exists a  $k$  such that the computation of the value of the function of  $r$  arguments depends upon the computation of the values of the function for lesser arguments in at most  $k$  places, possibly different places for different arguments, but  $k$  constant with respect to  $r$ . If the recursion runs along all  $r$  of the variables, the function is said to be completely multiple. The author also notes that the Ackermann majorization argument offers no help for the unsolved problem.

The author concludes that trichomoniasis is rare in infants and children owing both to the rarity of sexual contact with infected persons and to a natural resistance of the immature female genital tract to infection.
